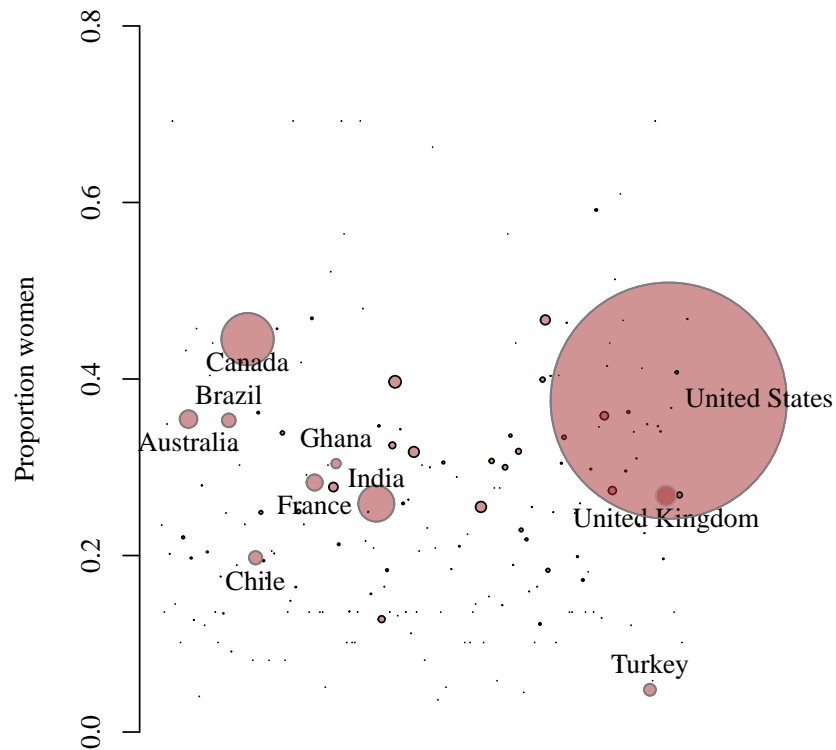

Figure 1: Proportion of women by country. The gender comes from a prediction based on the first name, which identifies 15076 women, 30726 men, and 10691 unknown. The plot shows the proportion of women per country that was estimated via a Bayesian-GLM regression approach. Women are about 30 percent of the population. In the figure, each circle's diameter is proportional to the number of registered members in the country. The name of the top 10 countries by registrants is also shown. Source: HeroX.com, February 2017.

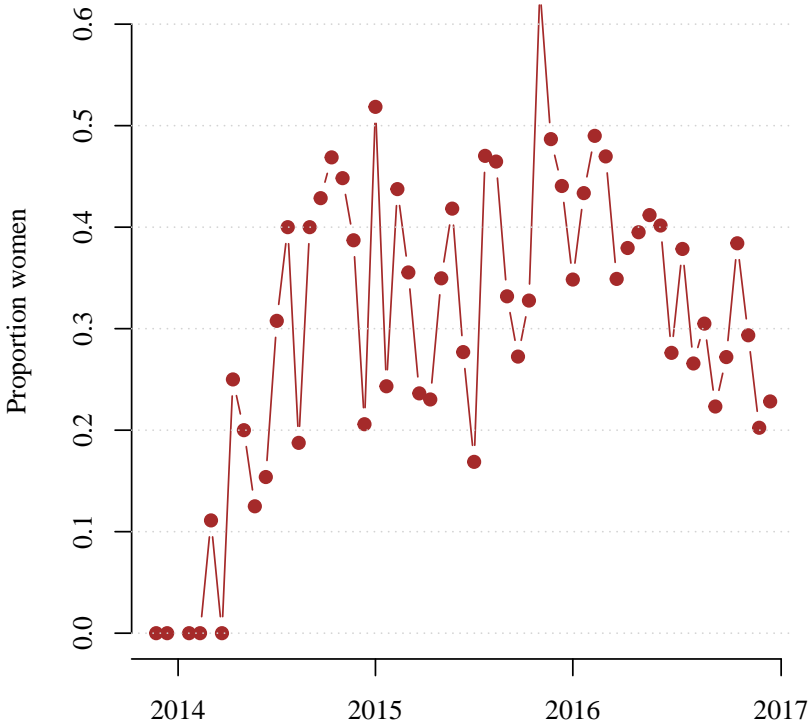

Figure 2: Proportion of women over time.

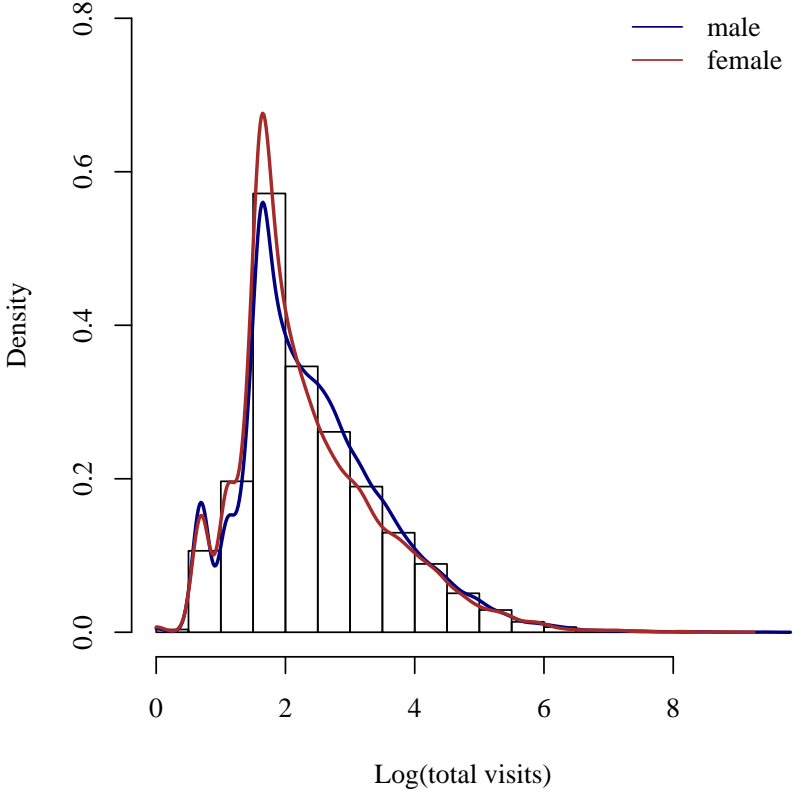

Figure 3: Member's total visits by gender in logarithmic scale.

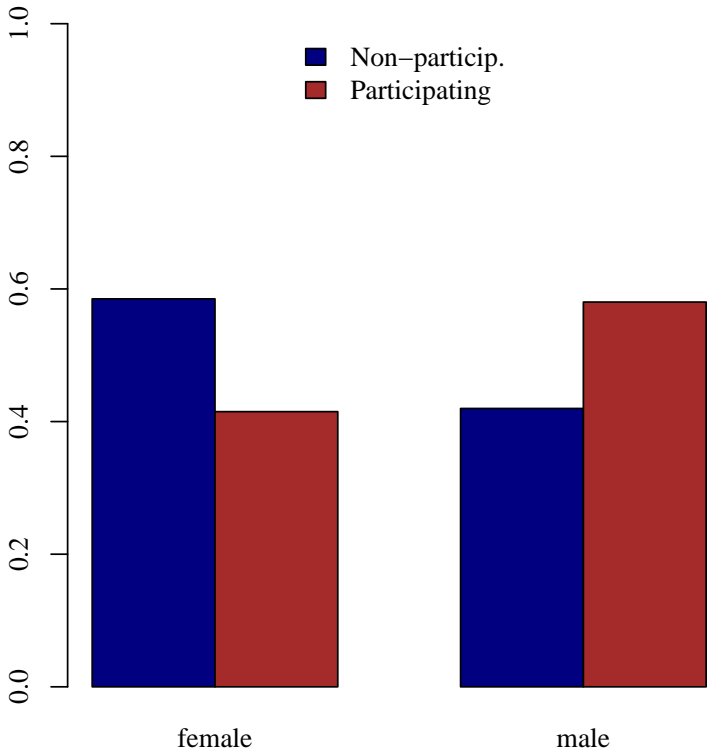

Figure 4: Participating members by gender. Men are 16 percent more likely to compete than women.
